Grinding Technology Gypsum

With engineering and project management that really understands the challenges of today's gypsum industry, Claudius Peters is synonymous with providing innovative solutions and technical excellence.

Grinding Technology

Claudius Peters is widely acknowledged as one of the foremost authorities on coal and mineral grinding technology. With knowledge gained in over 800 applications of our famous "EM" ball ring mill, we offer reliable solutions for the most extreme processing challenges.

Gypsum

Maximum reliability combined with efficient operating costs, makes Claudius Peters the ideal partner for your next gypsum project. From stockyard and materials handling systems, calcining mills, flash calciners, and kettle calcining systems, post calcining treatment and stucco cooling to pneumatic conveying, storage, mixing, packing and dispatch systems, gypsum producers can rely on Claudius Peters.

We instil a real ethos of quality and care into our organization all the way down the line. We carry out feasibility studies covering areas such as plant and raw material evaluation; we supply process systems including instrumentation and control for the entire production process and we can carry out and advise on the modernization of existing facilities to meet specific client, as well as regulatory, needs.

Claudius Peters is the complete package, giving you the complete solution.

The Open Day will include tours of the factory and test facilities with an overview of the technologies and latest innovation available from Claudius Peters.

We are confident you will enjoy the programme and look forward to seeing you.
